

MATERIALS PAGE

You will only have access to the following materials.

- 1) For each bolded word, underline if it is a control, and circle if it is a changing variable. Example control: **Blade Material**, Example changing variable **Blade Number**
- 2) For variables that are controls, choose one underlined value. When a variable is a control you will only have access to the underlined values.
- 3) For the variable that is the changing variable, choose four values and write the trial letter (A, B, C, D) next to each value. Example: Cardstock (original) A

General Materials:

- | | | |
|--|---|--|

Fan Distance: _____

Any distance between 20 cm – 100 cm (original fan distance = 60 cm)

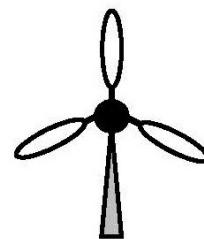

EXPERIMENTAL SET-UP

Write your changing variable (Ex: blade number) and the values (Ex: 4) you will use for your trials under each wind turbine.

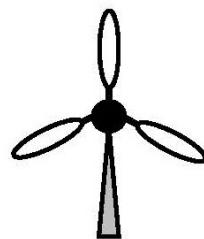

Trial A

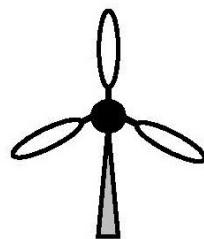

Trial B

Trial C

Trial D

Changing Variable:

:

Controls (variables you will hold constant):

Write the controls and the values you will use in all your trials (control/value, Ex: blade material/cardstock).

Table

Fill out the table for each of your trials. For the variables that remain constant, write the value in Trial A. Then, draw an arrow through each box indicating the variable is a control.

Underline controls, circle changing variables and box information about data collection.

Variables	Trial A	Trial B	Trial C	Trial D
<u>Blade Material:</u>	Paper	Kleenex	Metal	Styrofoam
<u>Blade Number:</u>	3			
<u>Weight Number:</u>	3			
<u>Weight Placement:</u>	6 cm			
<u>Dowel Placement:</u>	1.5 cm			
<u>Blade Angle:</u> <small>(list both the actual angle and what angle you will find on the wind turbine protractor)</small>	30°			
<u>Fan Distance:</u>	50 cm			
<u>Fan Speed:</u> <small>Other Variable</small>	3 (high)			
Predictions	Trial A	Trial B	Trial C	Trial D
Put an "L" in the trial that will give the least current and an "M" in the trial that will give the most current.				
Data	Trial A 2	Trial B 1	Trial C 4	Trial D 3
Measurements:	Current: 0.3 mA	0.0 mA	2.0 mA	1.9 mA
Observation:	Other: Blades bent	Blades ripped	Blades did not bend	Blades did not bend

The independent variable is the changing variable and the dependent variables are the final measurements/observations.

NOTES ON PRESENTATIONS
